## Mobile Monitor for iPhone by SaM Solutions

Developed by SaM Solutions the software application for iPhone is now available for download in the Apple Store global network of electronic shops. You can get it [here](#).

According to the IBM Tech Trends Survey, in 2011 the development of mobile applications is becoming one of key business directions of IT companies. Currently mobile technologies are very popular among the customers of SaM Solutions and are one of the priority and the most rapidly developing areas of the company's activities which recently resulted in the launch of the software application Mobile Monitor for iPhone.

Mobile Monitor is a unique utility application that lets you manage a Windows machine remotely. The application's server part is installed on a Windows 2000/XP/2003/Vista/Win7 machine, and the client - on an Apple iPhone. The software is designed for monitoring and controlling in real time on a mobile client various parameters of the server under control of the Windows operating system.

Currently the parameters, which can be displayed as numeric values, as well as various charts include:

- monitoring of the available disk space on a remote machine,
- S.M.A.R.T. parameters information including HDD temperature,
- HDD throughput monitoring,
- Memory process monitoring and kill,
- Network bandwidth utilization,
- CPU Information & utilization,
- Remote shutdown and reboot,
- & a lot more.

More features of the iPhone Mobile Monitor are coming in the next updates. In the near future SaM Solutions is also releasing the application under the operating system Android.

## About SaM Solutions

SaM Solutions is one of the leading software development outsourcing companies focusing on IT consulting and offshore programming services. 17-year business history in the international market, broad services palette, quality process compliant with DIN EN ISO 9000:2001 allow SaM Solutions to handle projects of any complexity, using state-of-the-art technologies.
